| Baggrund | Nærværende kliniske retningslinje er primært målrettet de fysioterapeuter og ergoterapeuter i kommuner og i praksissektoren, der yder fysioterapeutiske og ergoterapeutiske indsatser til personer med nedsat funktionsevne, som følge af erhvervet hjerneskade. Retningslinjen henvender sig sekundært til fagpersoner, der som del af det tværfaglige samarbejde i forhold til person-gruppen også bør have kendskab til indholdet af denne retningslinje. |

Dalsbø TK, Fure B. Notat 2013. ISBN 978-82-8121-551-1

Nasjonalt kunnskapscenter for helsetjenesten fikk i oppdrag å finne forskning om effekt av rehabilitering for personer med hjerneslag og/eller hjerneskade. Kunnskapscenteret oppsummerte funn om denne problemstillingen i en rapport i 2010. Hovedkonklusjonene i rapporten var:

”Godt planlagt og koordinert tidlig utskriving av slagpasienter fra sykehus med oppfølging i hjemmet av et tverrfaglig team fører til reduksjon i et kombinert utfall av død eller behov for opphold i institusjon etter 6 måneder, det gir kortere liggetid i sykehus, og det øker muligheten for at pasientene klarer seg i eget hjem og gjenopptar daglige aktiviteter.

Det utgjør trolig ingen forskjell i dødelighet. Tiltaket fører muligens til en viss reduksjon av kostnadene for slagpasienter med mild til moderat funksjonsnedsetting. Det er ikke holdepunkter for uheldige effekter for pasienter eller pårørende.”

Vi har nå oppdatert rapporten i form av et systematisk litteratursøk med sortering for å finne nyere, relevant oppsummert forskning om rehabilitering for pasienter med hjerneslag og/eller traumatisk hjerneskade.

Metode

Vi søkte etter systematiske oversikter publisert fra og med år 2009. Søket ble utført 15. mai 2013. Alle de identifiserte referansene ble vurdert for relevans i forhold til inklusjonskriteriene.

Resultater

Vi identifiserte totalt 29 referanser. Av disse ble 17 vurdert som mulig relevante.

2.Behandling og rehabilitering av pasienter med hjerneslag

(21.12.2010)

Vigdis Lauvrak, Inger Natvig Norderhaug og Marianne Klemp. . Notat 2010. ISBN 978-82-8121-387-6

Bakgrunn

En nasjonal pasientsikkerhetskampanje, med planlagt oppstart i 2011, er under forberedelse. For å støtte beslutningsprosessen rundt valg av innsatsområder og tiltak, har vi foretatt en hurtigoppsummering av kunnskapsgrunnlaget om effekt av behandling og oppfølging i egen slagenhet sammenlignet med behandling i generelle sengeavdelinger.

Oppdrag

Oppdraget ble gitt av Nasjonalt kunnskapssenter for helsetjenesten, sekretariatet for pasientsikkerhetskampanjen 2011.

Hovedkonklusjoner

- Behandling i egne slagenheter kan gi reduksjon i antall dødsfall (middels kvalitet) og redusere liggetiden i sykehus (lav kvalitet).
- Behandling i egne slagenheter har trolig liten eller ingen effekt for avhengighet av hjelp (middels kvalitet) og behov for pleie i institusjon (lav kvalitet).

Konklusjonene er basert på resultater i en ny rapport fra Nasjonalt kunnskapssenter for helsetjenesten og en Cochrane-oversikt fra 2007.
