<b>Notes</b>	<p><b>Identification:</b>  <b>Participants:</b>  <b>Study design:</b>  <b>Baseline characteristics:</b>  <b>Intervention characteristics:</b>  <b>Pretreatment:</b>  <i>Elisabeth Ginnerup-Nielsen</i>  <b>Continuous outcomes:</b>  <i>Elisabeth Ginnerup-Nielsen</i> Quality of Life Questionnaire, measured with adolescent rhinoconjunctivitis Quality of Life Questionnaire 25 items self reported quality-of-life measure designed specifically for patients aged 12 to 17 years with allergic rhinoconjunctivitis. The rating for those domains is on a 7-point scale from "not troubled" to "extremely troubled" (activity, nasal, nose/eye, eye, and emotions)Desuden bruges Treatment Outcome Question Scores· til rhinorrhea/itching/sneasing med spørgsmålet:"How do you feel that the study drug has controlled yourchild's allergic rhinitis symptoms in the last week?"  <b>Dichotomous outcomes:</b>  <b>Adverse outcomes:</b></p>

Risk of bias table

Bias	Authors' judgement	Support for judgement
Random sequence generation (selection bias)	Unclear risk	unclear
Allocation concealment (selection bias)	Unclear risk	unclear
Blinding of participants and personnel (performance bias)	Low risk	
Blinding of outcome assessment (detection bias)	Low risk	Comment: Not described but outcome self reported
Incomplete outcome data (attrition bias)	Unclear risk	Comment: No ITT analysis amount of pt's in each group and dropout unclear
Selective reporting (reporting bias)	Unclear risk	Comment: No trial protocol. Strange that there is no symptom score?
Other bias	Unclear risk	unclear

**Condemni 2000**

<p><b>Methods</b></p>	<p><b>Study design:</b> Randomized controlled trial  <b>Study grouping:</b> Parallel group  <b>Open Label:</b>  <b>Cluster RCT:</b></p>
<p><b>Participants</b></p>	<p><b>Baseline Characteristics</b>                  Intranasal fluticasone propionate</p> <ul style="list-style-type: none"> <li>● <i>Age Years (sd):</i></li> <li>● <i>Male %:</i></li> <li>● <i>Years with rhinitis:</i></li> </ul> <p>Ketotifen</p> <ul style="list-style-type: none"> <li>● <i>Age Years (sd):</i></li> <li>● <i>Male %:</i></li> <li>● <i>Years with rhinitis:</i></li> </ul> <p><b>Included criteria:</b> rhinitis symptom score of 24 points or greater on 4 of the 5 baseline days according to a 4-point scale for the five symptoms evaluated (nasal congestion, rhinorrhea, nasal itch, sneezing, and ocular symptoms): 0 = none; symptoms absent; 1 = mild; symptoms present but not annoying; 2 = moderate; symptoms present and annoying; and 3 = severe; symptoms interfere with daily activities or sleep. The maximum symptom score any patient could record in four days was 60.</p> <p><b>Excluded criteria:</b> Patients were excluded from the study if they had clinically significant abnormalities on physical examination or in urinalysis, hematology, or serum chemistry test results; nasal candidiasis, acute or chronic sinusitis, significant nasal polyposis or septum deviation; or rhinitis medicamentosa. Women who were pregnant, lactating, or of childbearing potential and not practicing an approved method of contraception were excluded from the study. Recent or regular use of any of the following medications was an exclusion criterion: topical corticosteroids, intranasal cromolyn, topical decongestants, systemic steroids, long-acting antihistamines, or investigational drugs. Patients were also excluded if they had a history of habitual abuse of nasal decongestants; used medication for another indication that might cause, suppress, or exacerbate the symptoms of seasonal allergic rhinitis; or had a history of hypersensitivity or nonresponse to topical steroids or antihistamines</p>

<p><b>Interventions</b></p>	<p><b>Intervention Characteristics</b>                  Intranasal fluticasone propionate</p> <ul style="list-style-type: none"> <li>● <i>Description:</i> Triamcinolone acetonide aqueous 0.055 mg spray. 2 sprays in each nostril daily and placebo tablet</li> </ul> <p>Ketotifen</p> <ul style="list-style-type: none"> <li>● <i>Description:</i> Loratadine 10 mg tablet and placebo nasal spray.</li> </ul>
<p><b>Outcomes</b></p>	<p><i>Continuous:</i></p> <ul style="list-style-type: none"> <li>● QoL emotions lower=better</li> <li>● eye symptoms</li> <li>● nasal congestion</li> <li>● rhinorrhea</li> <li>● itching</li> <li>● sneazing</li> <li>● total nasal score</li> </ul> <p><i>Dichotomous:</i></p> <ul style="list-style-type: none"> <li>● absence school/job</li> <li>● drowsiness</li> <li>● Nosebleeding</li> <li>● fractures</li> <li>● diabetes</li> <li>● Growth retardation</li> <li>● absence school</li> </ul>

The questionnaire had seven dimensions: (1) activities, (2) emotions, (3) eye symptoms, (4) nasal symptoms, (5) non-hay fever problems, (6) practical problems, and (7) sleep. Subjects' quality of life in each dimension was assessed. Response options for each question were on a 0 to 6 scale. The mean dimension scores had a range from 0 to 6. Overall quality of life was the mean for all questions and also had a range from 0 to 6. Emotions er valgt ud i samråd med Morten</p> <p><b>Dichotomous outcomes:</b></p> <p><b>Adverse outcomes:</b></p>
--------------	--

**Risk of bias table**

<b>Bias</b>	<b>Authors' judgement</b>	<b>Support for judgement</b>
Random sequence generation (selection bias)	Unclear risk	Comment: No information given on how the randomization was conducted.
Allocation concealment (selection bias)	Unclear risk	Comment: Not described
Blinding of participants and personnel (performance bias)	Low risk	Comment: . A double-dummy design was used: patients treated with TAA aqueous nasal spray received a placebo oral medication and patients treated with loratadine received a placebo nasal spray. Each loratadine tablet was placed inside a capsule for blinding purposes
Blinding of outcome assessment (detection bias)	Low risk	Comment: "double blind" but unclear if this concerns assessors. But outcome self-reported

Incomplete outcome data (attrition bias)	Low risk	Comment: Of the 176 patients in the loratadine group, 157 (89%) completed the study. A total of 348 patients had both a baseline and post-baseline efficacy assessment and were included in the intent-to-treat analysis (174 TAA aqueous and 174 loratadine). Relatively small dropout and ITT91% and 89% respectively completed the study. The dropout groups are described as comparable.
Selective reporting (reporting bias)	Low risk	Comment: No trial protocol but relevant outcome seems assessed
Other bias	Low risk

<b>Methods</b>	
<b>Participants</b>	
<b>Interventions</b>	
<b>Outcomes</b>	
<b>Identification</b>	
<b>Notes</b>	From updating search

**Risk of bias table**

<b>Bias</b>	<b>Authors' judgement</b>	<b>Support for judgement</b>
Random sequence generation (selection bias)	Low risk	<b>Quote from text:</b> a 1:1 ratio by a computer-generated randomization <b>Comment:</b> Computer generated sequence
Allocation concealment (selection bias)	Unclear risk	It is not described how the allocation sequence was concealed.
Blinding of participants and personnel (performance bias)	Low risk	The participants received identical nasal sprays, and we only use data from this study until the washout period - not the cross over period. In this way the personnel is blinded to who is getting better after the cross over.
Blinding of outcome assessment (detection bias)	Low risk	The potential for observer bias was avoided by the double-blind study design
Incomplete outcome data (attrition bias)	Low risk	Supportive analyses were carried out on the intent-to-treat (ITT) population, which was defined as all patients who were randomized and received at least 1 dose of study medication. ITT analyses were properly made.
Selective reporting (reporting bias)	Low risk	This study only presents data on 'Growth' which the study title tells us it will. No protocol located.

Other bias	Unclear risk Varying results when you look at each patient. Some have a larger growth when treated with intervention and others have a larger growth when treated with placebo.

Risk of bias table

Bias	Authors' judgement	Support for judgement
Random sequence generation (selection bias)	Unclear risk	Quote: "randomized, double-blind, parallel- group study" Comment: unclear how sequence generation as done
Allocation concealment (selection bias)	Unclear risk	Comment: Not described
Blinding of participants and personnel (performance bias)	Low risk	Quote: "Subjects were randomly assigned to receive either FP aqueous nasal spray, 200 ~g plus placebo oral tablet, once daily each morning or placebo aqueous nasal spray and loratadine oral tablet, 10 mg, once daily each morning for the duration of the treatment period." Comment: Double-blind double-dummy study - seems blinded
Blinding of outcome assessment (detection bias)	Low risk	Quote: "The primary efficacy assessment was the percentage of symptom-free days (score of 0) for nasal blockage during the day. Throughout the trial period, the subjects were also asked to keep a daily record of all medications taken and any side effects or problems they experienced." Comment: Not relevant when outcome is patient reported
Incomplete outcome data (attrition bias)	Low risk	Comment: dropout 30/240 - relatively small dropout and ITT analysis done.
Selective reporting (reporting bias)	Low risk	
Other bias	High risk	Comment: unclear how medication was used

Risk of bias table

Bias	Authors' judgement	Support for judgement
Random sequence generation (selection bias)	Unclear risk	Quote: "were randomized in a 1: 1 ratio to 28" Comment: Not described properly
Allocation concealment (selection bias)	Unclear risk	Comment: Not described
Blinding of participants and personnel (performance bias)	Low risk	Quote: "and 1 placebo capsule or placebo nasal spray (2 sprays per nostril) and 1 loratadine 10-mg capsule (loratadine tablet placed within a capsule)." Comment: Double-blind double-dummy study
Blinding of outcome assessment (detection bias)	Low risk	Comment: Subjective self-reported outcomes
Incomplete outcome data (attrition bias)	Low risk	Comment: low dropout
Selective reporting (reporting bias)	Low risk	Comment: No trial protocol but relevant outcomes seem reported
Other bias	Low risk

**Risk of bias table**

Bias	Authors' judgement	Support for judgement
Random sequence generation (selection bias)	Low risk	The physician contacted the data-collecting center after evaluating the eligibility criteria of the patient. Patients who matched the eligibility criteria were registered in the study and assigned in accordance with the computer-generated random allocation table with a block size of 4 and 6.
Allocation concealment (selection bias)	Low risk	To conceal the assignment sequence, central randomization was used, and the block size was not released.
Blinding of participants and personnel (performance bias)	Low risk	Additionally, our study did not involve any blinding processes, which may have led to a potential bias in the results.
Blinding of outcome assessment (detection bias)	High risk	Additionally, our study did not involve any blinding processes, which may have led to a potential bias in the results.
Incomplete outcome data (attrition bias)	Low risk	These analyses were based on intent-to-treat.
Selective reporting (reporting bias)	Low risk	Relevant outcomes presented and trials was registered before taking place:  The clinical trial registration number is UMIN000000575 ( <a href="http://www.umin.ac.jpctrindex.htm">www.umin.ac.jpctrindex.htm</a> )Protocol?
Other bias	Unclear risk	This study was performed as an open label study. It is unknown if other bias, than those already assess, could have influenced on the results.

## Data and analyses

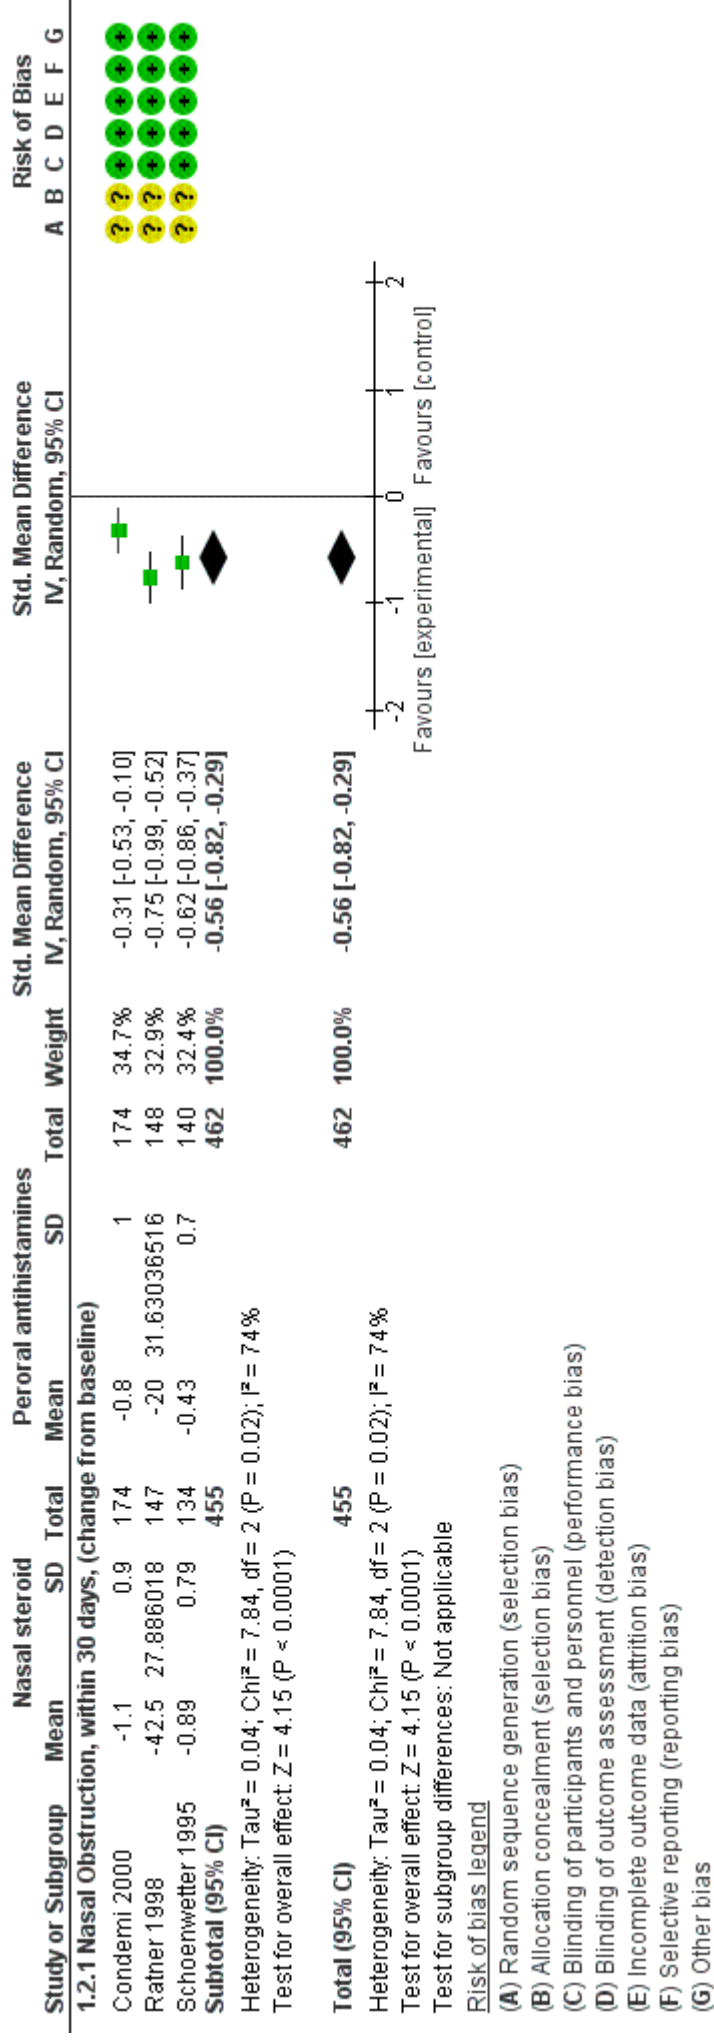

### 1 Nasal steroid vs Peroral antihistamines

Outcome or Subgroup	Studies	Participants	Statistical Method	Effect Estimate
1.2 Tilstoppet næse (Nasal Obstruction)	3	917	Std. Mean Difference (IV, Random, 95% CI)	-0.56 [-0.82, -0.29]
1.2.1 Nasal Obstruction, within 30 days, (change from baseline)	3	917	Std. Mean Difference (IV, Random, 95% CI)	-0.56 [-0.82, -0.29]
1.3 Total næsesymptomer (Total nasal symptom)	2	307	Std. Mean Difference (IV, Random, 95% CI)	-0.70 [-0.93, -0.47]
1.4 Næseflod (Rhinorrhea)	2	622	Std. Mean Difference (IV, Random, 95% CI)	-0.47 [-1.00, 0.05]
1.4.3 Rhinorrhea, within 30 days (change from baseline)	2	622	Std. Mean Difference (IV, Random, 95% CI)	-0.47 [-1.00, 0.05]
1.5 Næsekløe (Nasal Itching)	3	917	Std. Mean Difference (IV, Random, 95% CI)	-0.42 [-0.65, -0.18]
1.5.4 Itching, within 30 days (change from baseline)	3	917	Std. Mean Difference (IV, Random, 95% CI)	-0.42 [-0.65, -0.18]
1.6 Nysen (Sneezing)	3	917	Std. Mean Difference (IV, Random, 95% CI)	-0.52 [-0.73, -0.32]
1.6.5 Sneezing, within 30 days from baseline (change from baseline)	3	917	Std. Mean Difference (IV, Random, 95% CI)	-0.52 [-0.73, -0.32]
1.7 Øjensymptomer (Eye symptoms)	3	662	Std. Mean Difference (IV, Random, 95% CI)	-0.08 [-0.23, 0.08]
1.7.1 Ocular Symptoms, within 30 days (change from baseline)	3	662	Std. Mean Difference (IV, Random, 95% CI)	-0.08 [-0.23, 0.08]
1.8 Døsigthed (Dizziness)	0	0	Mean Difference (IV, Fixed, 95% CI)	Not estimable
1.9 Næseblødning (Nose bleeding)	0	0	Mean Difference (IV, Fixed, 95% CI)	Not estimable

1.10	Knoglebrud (Fractures)	0	0	0	Mean Difference (IV, Fixed, 95% CI)	Not estimable
1.11	Diabetes	0	0	0	Odds Ratio (M-H, Fixed, 95% CI)	Not estimable
1.12	Fraværsgage fra arbejde/skole (Days away from school/work)	0	0	0	Odds Ratio (M-H, Fixed, 95% CI)	Not estimable
1.13	Livskvalitet (Quality of Life)	1	295	295	Mean Difference (IV, Fixed, 95% CI)	-0.90 [-1.18, -0.62]
1.13.1	Quality of Life, total score 2 weeks (change values)	1	295	295	Mean Difference (IV, Fixed, 95% CI)	-0.90 [-1.18, -0.62]
1.14	Væksthæmning (ben) (Growth retardation (leg))	0	0	0	Mean Difference (IV, Fixed, 95% CI)	Not estimable

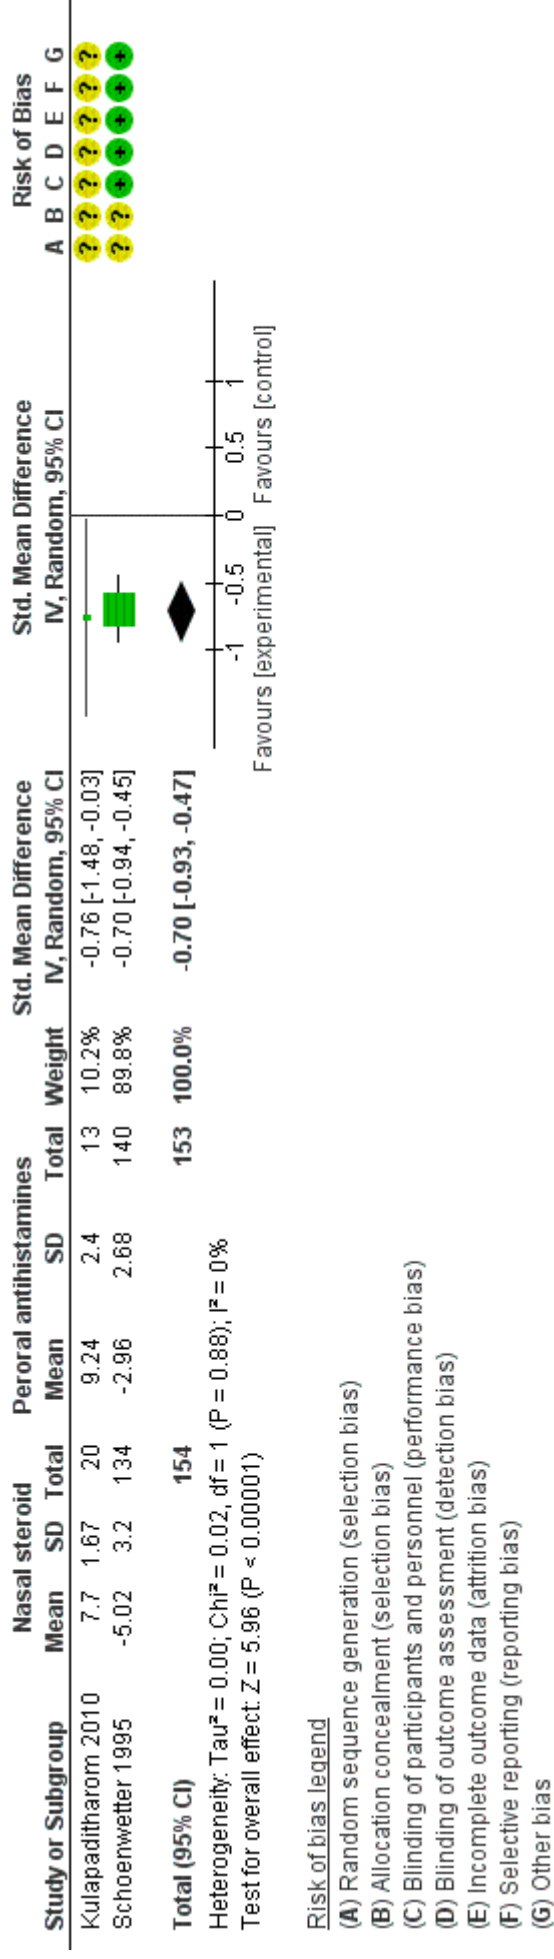

## Figures

Figure 1 (Analysis 1.2)

Forest plot of comparison: 1 Nasal steroid vs Peroral antihistamines, outcome: 1.2 Tilstoppet næse (Nasal Obstruction).

Figure 2 (Analysis 1.3)

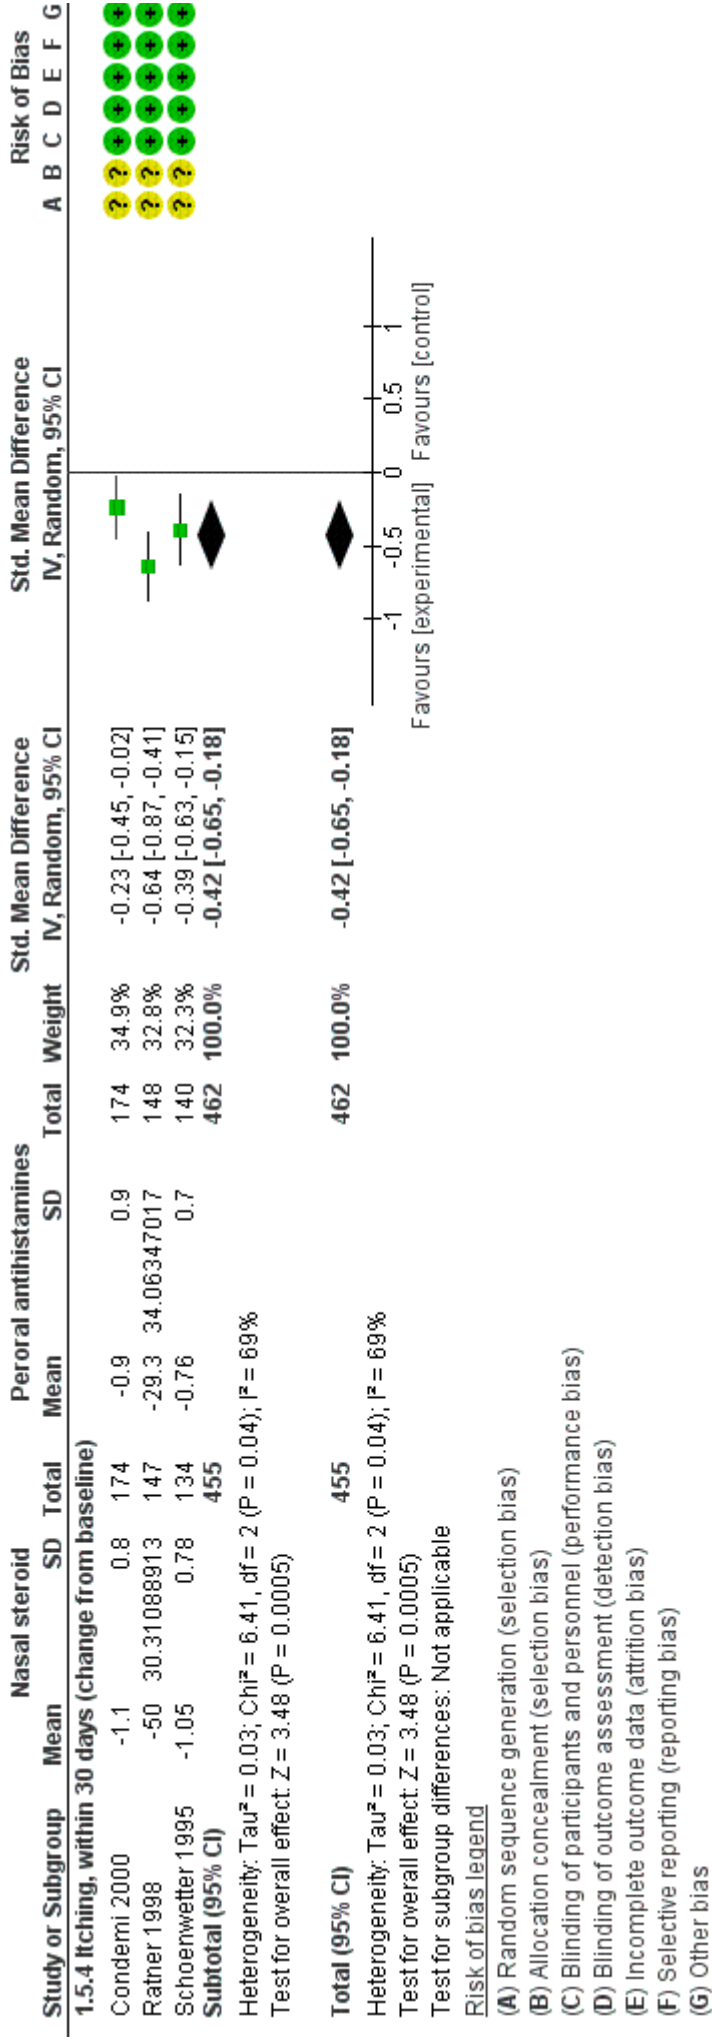

Forest plot of comparison: 1 Nasal steroid vs Peroral antihistamines, outcome: 1.3 Total næsesymptomer (Total nasal symptom).

**Figure 3 (Analysis 1.4)**

Forest plot of comparison: 1 Nasal steroid vs Peroral antihistamines, outcome: 1.4 Næseflod (Rhinorrhea).

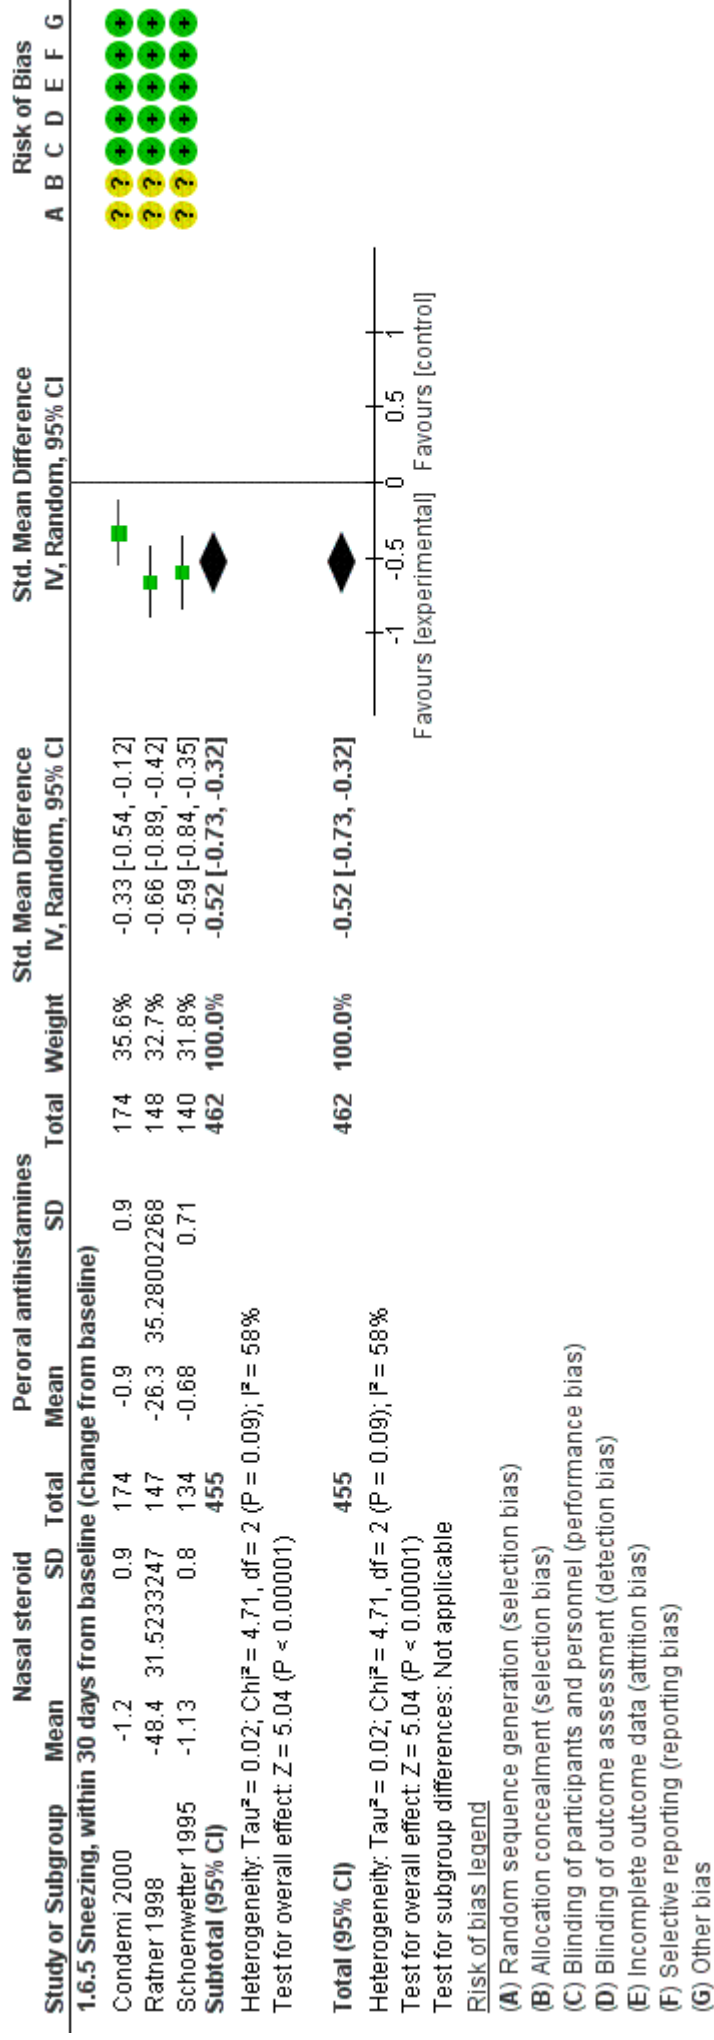

Figure 4 (Analysis 1.5)

Forest plot of comparison: 1 Nasal steroid vs Peroral antihistamines, outcome: 1.5 Næsekløe (Nasal Itching).

Figure 5 (Analysis 1.6)

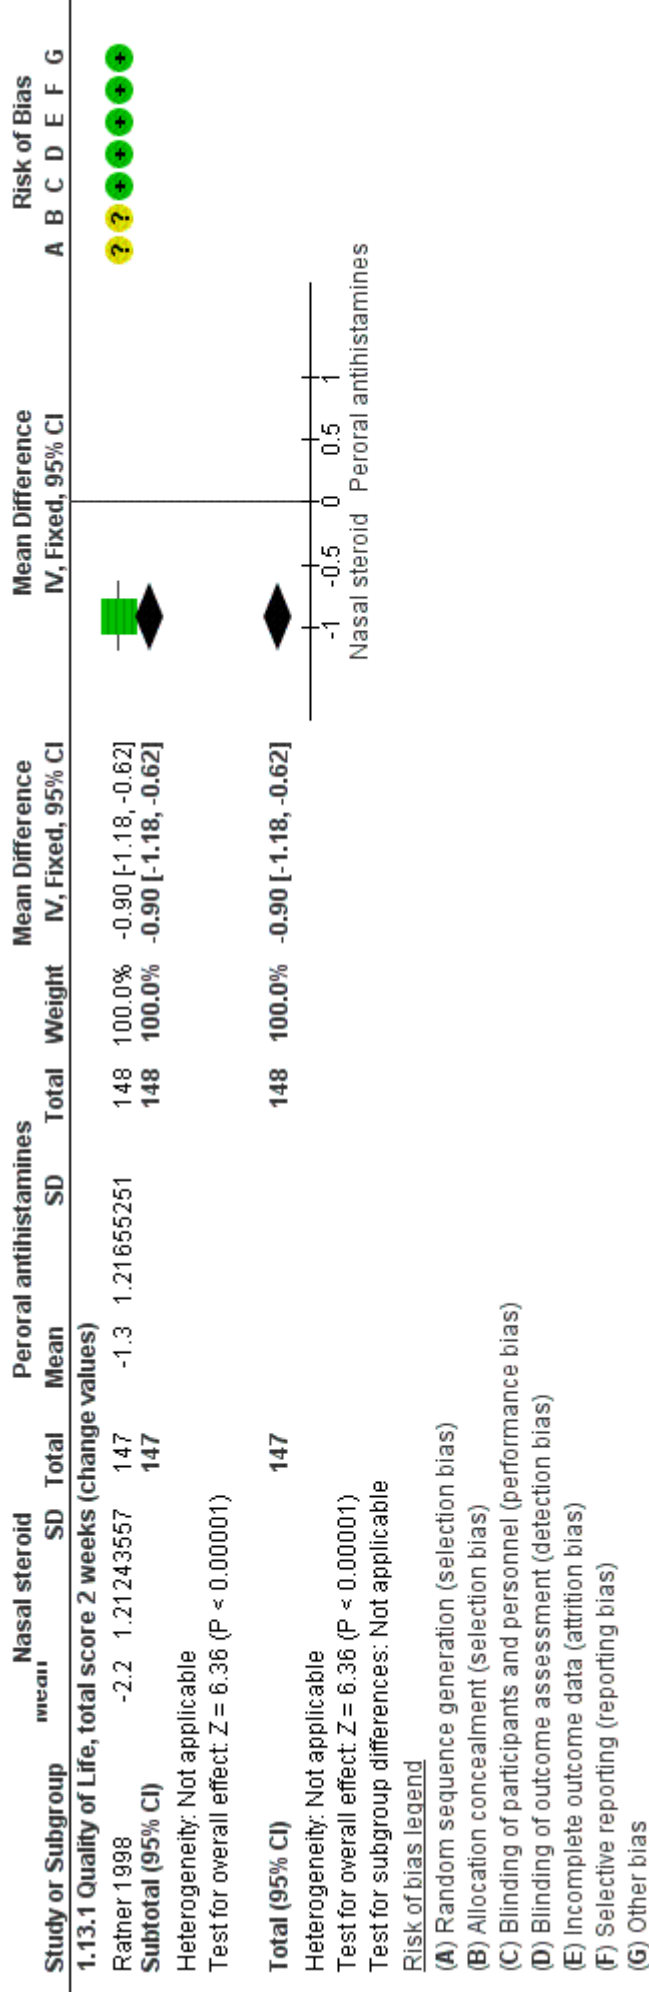

Forest plot of comparison: 1 Nasal steroid vs Peroral antihistamines, outcome: 1.6 Nysen (Sneezing).

Figure 6 (Analysis 1.7)

Forest plot of comparison: 1 Nasal steroid vs Peroral antihistamines, outcome: 1.7 Øjensymotomer (Eye symptoms).

Figure 7 (Analysis 1.13)

Forest plot of comparison: 1 Nasal steroid vs Peroral antihistamines, outcome: 1.13 Livskvalitet (Quality of Life).
