

SUNDHEDSSTYRELSEN

Bilag 1

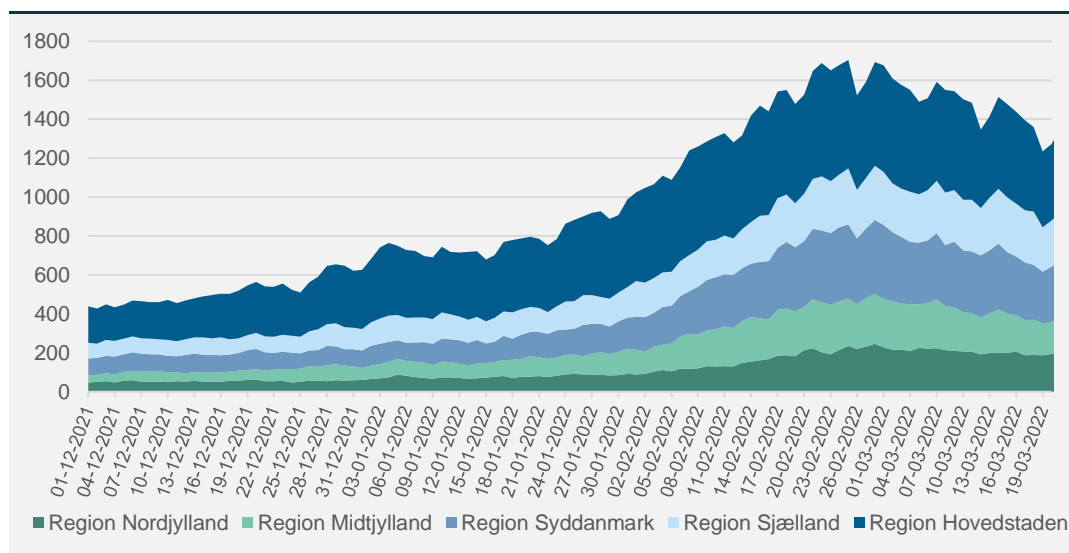

Figur 24a beskriver udviklingen i incidens af nuværende hospitalsindlagte over tid med positiv test for SARS-CoV-2. Det ses, at der i den seneste periode har været en stigning i antallet af patienter indlagt med en laboratoriebekræftet positiv PCR-test i de ældre aldersgrupper, men incidens i antallet af indlagte patienter i de yngre aldersgrupper er stabilt. Dette er koblet til flere patienter, som er indlagt i psykiatrien med et positivt prøvesvar.

Figur 24a: Antal indlagte med laboratoriebekræftet positiv PCR-test for SARS-CoV-2 per 100.000 borgere i aldersgruppen

Figur 24b beskriver udviklingen i antal indlagte med positivt PCR-prøve for SARS-CoV-2, fordelt på regioner, hvor det fortsat ses, at hovedparten af patienterne er indlagt i Region Hovedstaden.

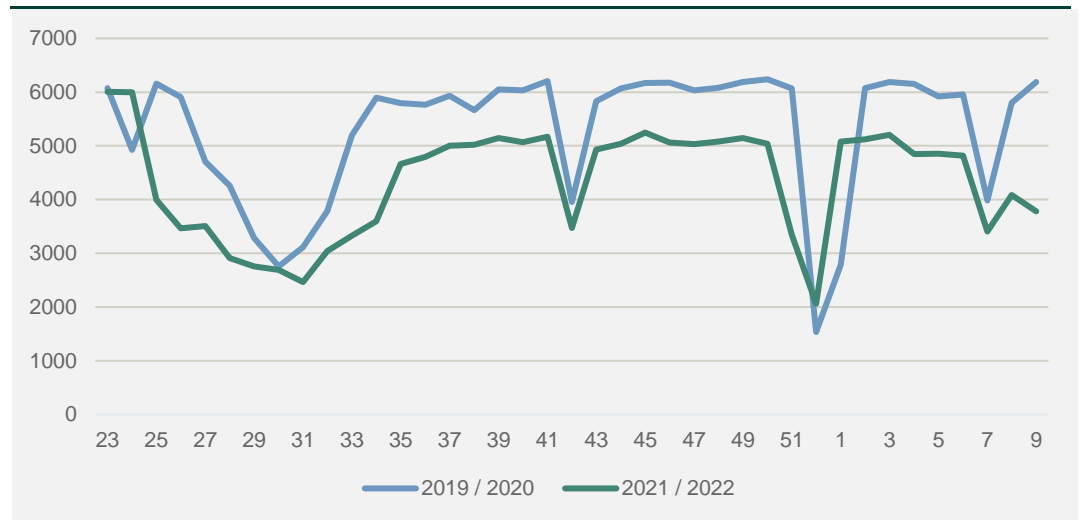

Figur 24b: Udvikling i det samlede antal af indlagte med laboratoriebekræftet positiv PCR-test for SARS-CoV-2 fordelt på regioner de sidste to måneder
